

## GRAVESTONE SURVEY

Look for DIFFERENT types of rocks used for gravestones and write down what you find

**IMPORTANT** Old gravestones usually have lichens growing on them and you can't see much of the actual stone. Write that down, don't damage the lichen - it's a lot older than you – some grow less than 1mm a year.

Description of rock colour, crystals/grains, rough or shiny, lots of lichens etc	Rock type (if you know)	Year of death (eg 1876)	Name	Any carved symbols eg flowers, cross, bird (words or picture)
